## 1 Chapter 1

This is chapter 1.

### 1.1 Images convention

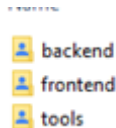

For any chapter file, use direct relative path as below. The converter script will rebase the root folder accordingly during conversion. So you can still preview with proper relative folder here, and at same time, get the link corrected during conversion to latex such that, latex also has image properly referenced.

### 1.2 Images in Lists

Captioned image references amidst list gets centered. Earlier, due to a [bug](#), image was not even getting referenced, but now at least it shows up, as this bug was fixed in pandoc 2.14.2.

### 1.3 PlantUML Demo

You can do native plantuml now in our docgen util by including [pandoc-plantuml-filter](#) in the script.

```
```plantuml
@startuml
Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response

Alice -> Bob: Another authentication Request
Alice <-- Bob: another authentication Response
@enduml
```
```

The above script could give you

The `@startuml`, `@enduml` are optional. This has a slight annoyance that, a `plantuml-images` directory would be created along side `assets` folder, which at the moment I could not customize to redirect in to `assets` folder.

## 2 Chapter 2

This is chapter 2.
